RoHS Directive 2002/95/EC and Weee Directive 2002/96/EC

Information to our customers and other partners;

The restriction of dangerous materials in products is a worldwide trend. For this purpose the RoHS and Weee directive was implemented in Europe. From 1st July 2006 this directive restricts the use of six materials in the manufacture of various types of electronic and electrical equipment: Lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) and polybrominated diphenyl ether (PBDE).

The products and equipment sold by GARO AB are not affected by the categories in the above directives. But as a certified company and according to our environmental protection philosophy, it is a matter of course that we voluntary adapt all products to the RoHS standard.

For more detailed information, don't hesitate to contact us.

Best regards,

GARO AB
