

A white electric car is shown from the rear side, parked in front of a wall made of vertical wooden planks. A black wallbox is mounted on a black post to the left of the car. A charging cable is plugged into the car's charging port. The scene is lit with soft, natural light, creating a clean and modern aesthetic.

**A wallbox for
your cooperative.**

The perfect wall-box for housing cooperatives

With its minimalist design and powerful software, GARO Entity Pro is the ideal solution for your housing cooperative. With support for both single-phase and three-phase charging, it can charge all vehicles. You can help make your residents' everyday lives that bit easier while also being a part of the green transition.

SCALABLE AS NEEDS GROW

Predicting just how many wallboxes it'll take to cover the future needs of a housing cooperative can prove difficult. However, with GARO Entity Pro, you can scale things up as needs grow. You simply start out with a smaller number of wallboxes and then, as more people in the building choose to drive electric, easily and independently scale up the system. The first wallboxes need to be installed by an electrician, but the rest are easily connected without any professional help. Smart and cost-effective.

Future-proof your cooperative

GARO Entity's future-proof technology, attractive design and smart features leave us convinced that this is a wallbox equipped for the demands of the future. The software offers support for functions such as Plug & Charge for convenient identification and debiting.

MOVABLE OUTLET

GARO Entity Pro comes with a movable outlet to make charging easier for users. In addition to enabling tenants to charge from the easiest and most convenient side, the movable outlet also makes placement easier as it offers greater flexibility when mounting and installing the wallbox.

AN APP FULL OF POSSIBILITIES

Split the costs between your residents fairly with the GARO Connect app. Gain complete control over your vehicle charging with practical functions such as charger monitoring, usage data for debiting and user administration.

OPEN INTERFACE FOR FREEDOM OF CHOICE

Here at GARO, we're strong believers in never limiting our customers' options and preferences. Thanks to the open interface of our wallboxes, as a property owner, you're never tied to a single provider, leaving you free to use your preferred provider.

Best where it counts the most

We're striving hard to be a role model in electric vehicle charging and, above all, to be the best when it comes to safety. Naturally, this means that GARO Entity Pro is safe for users, their cars and your property.

LOAD BALANCING

Just like our other wallboxes, GARO Entity Pro is smart enough to ensure that the load on your property doesn't exceed its limits. The load balancing offered by the wallbox means that the charging output is adapted to the current electricity consumption of your housing cooperative. So, as a property owner, you need not worry about tripping the main fuse.

PHASE BALANCING

As if that weren't enough, GARO Entity Pro also supports phase balancing, which takes both safety and charging efficiency to the next level. Phase balancing means that the electricity from your distribution cabinet is distributed more evenly, ensuring even more well-balanced charging. When there's insufficient power for three-phase charging, the wallbox will automatically switch to single-phase charging using the phase with the most power to spare. Safety and smartness at their best.
